**System Supplier**  
of machined components.

## **METAL EXPERTISE**

since 1860

We develop, calculate, forge and process, making use of the most modern production technologies and sophisticated components for mechanical and plant engineering.

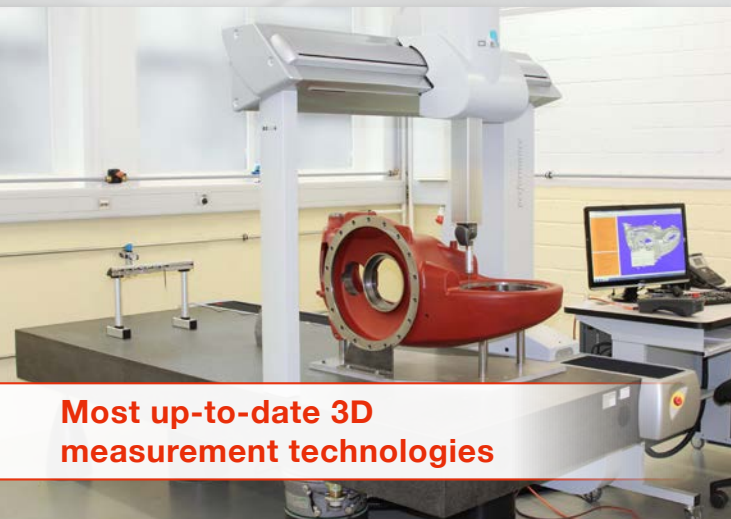

# METAL EXPERTISE

Since 1860, AMMANN AG in Switzerland has stood for high quality and efficient processing of steel, right up to light metals.

AMMANN AG is your system supplier for machined components and assemblies. Development expertise arises out of this specific know-how mix, which we make available to our customers.

Customer satisfaction and sustainable customer success are our main focuses. Use our experience in the areas of development and production technologies to your advantage!

AMMANN AG supports its customers in product development, project management and procurement.

**Most up-to-date 3D  
measurement technologies**

## System Supplier

- Large vertical range
- Module assembly
- Many years of experience in component development and the application of optimal manufacturing processes.
- Procurement of blank castings of different quality standards, for different procedures
- Comprehensive logistics solutions

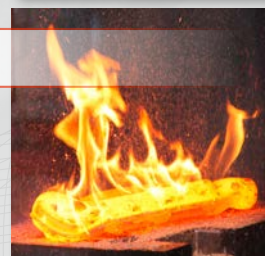

## Processing Technology

- Highly productive series manufacturing with manual, partially or fully automated assembly
- Milling machining with 3 to 5 axes up to 1,200 mm part size and 1,000 kg part weight
- Precision turned and rotary milled parts – opening 65 mm/length 350 mm
- CAD/CAM programming

## Forging Technology

- Forged parts made of malleable aluminium and steel alloys
- Unit weights up to 80 kg
- Material flow simulations of complex geometries

## Welding Technology

- Welding according to increased requirements
- Dimensions up to 5m and 3 tonnes unit weight
- Comprehensive welding approvals e.g. CL1 according to EN15085-2
